## TECHNICAL INFORMATION SHEET

### PS 101

### HEAVY DUTY PAINT STRIPPER

**PS 101** is a blend of powerful solvents and active agents which ensures rapid removal of many different coatings, including stove enamels and powder coatings

#### Features

**Non-Flammable**

**Fast-Acting**

**Easy to Use**

**Economical &  
Labour saving**

**Phenol-Free**

#### Benefits

**PS 101** contains no flammable solvents

**PS 101** rapidly strips most single-coat paint systems in seconds

A steel soak tank is all that is required to use **PS 101**. No heat or agitation is necessary to effectively remove coatings

Articles may be left to soak in **PS 101** then removed and simply rinsed with water. The bath can be used again and again for maximum economy

**PS 101** contains no phenol and is less hazardous than many paint strippers currently available

#### Directions for use

Use **PS 101** in a mild steel tank with approximately 3" of water seal to minimise evaporation. Immerse work, ideally using wire mesh baskets, into the tank at normal room temperatures for as long as is required to remove the coating, before lifting out and rinsing with water. The work should then be dried as soon as possible to avoid staining. The tank should be de-sludge regularly to remove paint particles and other debris
