TECHNICAL INFORMATION SHEET

DIGESTER

Grease and Odour Control Drain Cleaner

DIGESTER is a specially selected blend of non-toxic natural microbes, which digest oils, fats, greases and other organic matter blocking drainage systems. This can then be flushed away, leaving grease free with no odour problems.

DIGESTER is demonstrably more effective than conventional drain cleaners as a bio-film is formed which produces a continuous and renewable supply of highly active enzymes for fat and grease degradation. This bio-film adheres to the drainage system walls and is highly resistant to cleaning fluids and disinfectant, thus providing a longer lasting protection than caustic products which have a minimal contact time.

Regular application of **DIGESTER** will: -

- Eliminate blockages
- Eliminate odours
- Eliminate the use of hazardous chemicals
- Eliminate the need for expensive roding and jetting of drains
- Doesn't effective drainage walls
- Significantly reduces B.O.D's (Biological Oxygen Demand) and C.O.D.'s (Chemical Oxygen Demand), thereby reducing the amount of processing required at Sewage Plants.

Directions for Use

Manual Applications: For the first week of treatment, apply an initial dose of 250ml of **DIGESTER** per day to the drainage system, then flush through with 5 litres of warm water, followed by 150ml of **DIGESTER** per day in the second week and thereafter at the end of the working day. The dose should be applied at the head of the drainage system (i.e. sink) or immediately before the main entry of the organic waste. **Automatic Dosing** should be timed for 1 hour after kitchen shut down and injected directly into the line.
